Install DNS Server on Windows Server

1️⃣ Install DNS Feature

```
Install-WindowsFeature DNS -IncludeManagementTools
```

Create DNS Zone

1️⃣ Create a new primary zone

```
Add-DnsServerPrimaryZone -Name "3bhits.local" -ZoneFile "3bhits.local"
```

Configure DNS Forwarders

1️⃣ Set primary forwarder

```
Set-DnsServerForwarder -IPAddress "8.8.8.8"
```

2️⃣ Add secondary forwarder

```
Add-DnsServerForwarder -IPAddress "8.8.4.4"
```

3️⃣ Check configured forwarders

```
Get-DnsServerForwarder
```

Create DNS A Record

1️⃣ Add A record for the server

```
Add-DnsServerResourceRecordA -IPv4Address 10.0.5.10 -Name ns1 -ZoneName 3bhits.local
```

> **Important**
> `10.0.5.10` must be the IP address of your Windows Server.

Configure Windows to use its own DNS

1️⃣ Set local DNS server

```
Set-DnsClientServerAddress -InterfaceAlias "Ethernet0" -ServerAddresses "10.0.5.10"
```

Configure DHCP to distribute your DNS Server

1️⃣ Set DNS server in DHCP scope

```
Set-DhcpServerv4OptionValue -ScopeId 10.0.5.0 -DnsServer 10.0.5.10
```

2️⃣ Verify DHCP DNS configuration

```
Get-DhcpServerv4OptionValue -ScopeId 10.0.5.0
```

> ⓘ **Note**
>
> The client must renew their IP address to receive the new DNS settings.
