Configure SSH on Windows Server

1️⃣ Check if SSH Server is installed

Open `PowerShell` (as Administrator) and run:

```
Get-Service | Where-Object { $_.Name -like "*sshd*" }
```

> ⓘ **Note**
>
> If no service appears, OpenSSH Server is not installed.

2️⃣ Start SSH Server

```
Get-Service | Where-Object { $_.Name -like "*sshd*" } | Start-Service
```

3️⃣ Set SSH Service to start automatically

```
Get-Service | Where-Object { $_.Name -like "*sshd*" } | Set-Service -
StartupType Automatic
```

Configure Port Forwarding (VirtualBox)

1️⃣ Open NAT Network settings

In VirtualBox: `File → Tools → Network → NAT Network → Port Forwarding`

Add a rule:

- Host Port: `4448` (or another free port)
- Guest IP: `10.0.5.10`
- Guest Port: `22`

Check Firewall Settings

1️⃣ Check existing SSH firewall rules

```
Get-NetFirewallRule | Where-Object { $_.Name -like "*ssh*" }
```

2️⃣ Set Network Profile to Private

If SSH is blocked, change the network category:

```
Set-NetConnectionProfile -NetworkCategory Private
```

After that, try connecting again via SSH.
